

JETMASTER[®]

PAPER

The best type of media to use with the JetMaster Photo Wrap is one that is flexible and easy to wrap. This specially developed JetMaster Paper has been designed for the JetMaster Photo Wrap frames although we happen to think they look quite good on a JetMaster Photo Panel as well.

With a high polyester content and flexible coating, JetMaster Paper is tough as well as lightweight; it can even be stretched over a wooden frame like a traditional canvas.

There is next to no drying time required, unlike conventional inkjet canvases which need to dry for 24 hours before they can be stretched, JetMaster Paper is tough enough right off the printer and it is resistant to surface cracking, even on darker colours, meaning that your print looks as good when it is on the wall as the day it came off the printer.

The perfect companion to creating JetMaster Photo Wraps. Available in two textures; Smooth (JMP20) and Canvas Effect (JMP21), both are inkjet compatible.

Applications:

- Smooth and Canvas Effect finishes for JetMaster Photo Wraps
- Smooth and Canvas Effect finishes for JetMaster Photo Panels
- Canvas alternative for wooden frames
- Paste-Up wallpaper for short term installations

General Specifications:

- Tough
- Flexible
- Smooth or Canvas Effect surface
- ICC Profiles available
- Aqueous Inkjet Compatible

Available Sizes

JMP20	A4	A3+	17"	24"	44"
JMP21	A4	A3+	17"	24"	44"

Eco-Solvent compatible available on request, subject to quantity.
